

OPAL GENERATION 2

TRUCK CHASSIS

SIDE HEIGHT: 1200-1600 MM

LENGTHS: 4200-9000 MM

FLOOR: 5-12 MM HB500/HB450

SIDES: 5-8 MM HB450

EMPHASIS ON LOW WEIGHT

Opal is designed to carry a lot – but to weigh little. The flexible structure, without reinforcing sections, offers considerable weight saving in comparison with conventional designs. The structure consists of a front section with brackets for attaching stabilising tipping cylinders and a sturdy rear section for mounting bearing blocks and tailgates.

Our decades of experience from our in-house production of the “Ilsbo trailer”, amongst others, and the know-how we have gained from building other chassis types, have enabled us to develop a unique design, fully adapted for use with our Opal buckets.

- 1** Low weight – big payload.
- 2** Half-pipe design for maximum strength.
- 3** Available as a combi for asphalt distribution.
